1862 The unusual dryness of Sept reduces the annual fall which would otherwise be excessive, so wet and ungenial has the weather been that there were whole fields of Oats out in shock when the snow fell and covered them it being 15 in deep on Tiverton - On the whole it has been the worst harvest for the difficulty of saving an indifferent crop ever remembered, many of the Potatoes are still unlifted Jan<sup>y</sup> 1863

1863 To the end of June splendid weather. Oak in leaf earlier than I ever remember best rise in its bark for 40 years, Thrush heard in Dec. & Primrose in bloom

1868 Sept 1<sup>st</sup> greatest flood for 30 y<sup>r</sup>. Oaks in leaf long before the Ash. Early in May a W wind blighted all the jostling supposed to be changed with salt even the native Sea buck h<sup>o</sup> suffered

- 1870 *C C C* 1870 Jan-Mar. estimated from Callander the gauge & taken from the  
 1870 *g* on exposed level terrace. Snow drops still in flower on 1<sup>st</sup> April Heliotrope & Dahlias in flower on 1<sup>st</sup> Nov.
- 1871 The heaviest fall of snow ever recorded fell on 1<sup>st</sup> Jan. depth 22 inches breaking many branches especially of scotch pine & spruce they are not much for such falls of snow. While the Norway spruce stood it without a broken branch.
- 1878 Some doubt as to the amount in Dec. as the gauge was put in a very bad position during the construction of a tennis court.
- 1879 Obs. in Jan. Feb & March not reliable - the growth of trees &c has in the course of years affected the rain gauge so its position was changed in March to remove it from their influence.
