1860 to 1862. Gauge by Jones of Holborn 12 in diam. 2 ft below M. S. L.

On the beach.

The rainfall here is small because the clouds are drawn right and left by Beachy Head and Fairlight - Most of the e. which waters the Weald of Sussex passes through the gap in the downs near Wilmington, and heavy rain often falls at Hailsham when there is none on the coast.

1876 ~~At~~ some years ago observer started a gauge on the beach which he afterwards removed to his garden so that he now has two one in his front garden the other in the kitchen garden, both of which he reads, & enters the highest amount

"I have had two gauges since Oct. 75 and as I found that the one in the back garden sometimes had a lot more than the one on the beach I moved the one from the beach to the front garden in Jan'y 76 they still vary a little according to the wind, I always register the largest quantity" M. Vidler.
